PPFP PROJECT

REDUCED MODEL, NOT MAINTAINED
II. CONTENTS
II. CONTENTS

- Developing favorable environment for the poor
- Impact on poor area
- Direct support to the poor
- Diversified livelihood
- Presentation of suitable livelihood models
After nearly 5 years of implementation of PPFP project, there have been remarkable positive changes in Hong Hoa commune. These models are proved to generate stable revenues and livelihood for the people and raise people’s awareness of developing economy and overcoming poverty for themselves. However, some problems have arisen during the implementation of the project. For example, the community consultation in selecting and building economic models is not good, which leads to inappropriate models and fails to promote people’s internal resources. Moreover, the management of model quality is unreliable and substandard.
THANK YOU FOR LISTENING!
